

PRESS RELEASE

Kverneland Group Ireland to Host a Show-Stopping Line-Up At The 2024 National Ploughing Championships

Explore the Latest in Agricultural Technology with Kverneland at this year's event

September 2024 Kilkenny, Ireland

It wouldn't be the Ploughing Championships without the iconic presence of Kverneland, a name that has become synonymous with top-tier agricultural machinery. This year, Kverneland is set to make a big impression by showcasing a comprehensive range of cutting-edge Arable, Grass, and CropCare equipment, alongside Siloking feeders and McConnel machinery as official importer and distributor for in Ireland.

Revolutionary Ploughing with the Kverneland Plough Body No. 40

Leading the charge at this year's event is the Kverneland Plough Body No. 40, a new addition to Kverneland's ploughing lineup which will be on a 5f ES plough along with a Packomat. Specifically designed for large tractor tyres, the Plough Body No. 40 offers lower pulling forces, meaning reduced fuel consumption and less strain on your tractor—key factors in extending machinery life and cutting costs.

Building on the success of previous models, the Plough Body No. 40 is engineered to improve soil turnover and aeration, which are crucial for enhancing soil health and boosting crop yields. Even in challenging conditions, this plough body ensures optimal performance, setting the stage for a successful harvest.

Introducing the Kverneland Rotago F Power Harrow

Also making its debut is the Kverneland Rotago F Power Harrow, a next-generation machine designed to transform seedbed preparation. Available in both basic and ISOBUS versions, the Rotago F allows for on-the-go adjustments of the levelling bar and working depth, providing unmatched flexibility and efficiency.

With its advanced features, including a pushed gear case and parallelogram linkage, the Rotago F offers seamless adjustments without the need to re-align the 3-point linkage or rear roller. This not only makes operations easier but also supports sustainable farming by minimizing energy use.

Pairing perfectly with the Rotago F is the F-Drill CB F, a precision seeding solution that's all about adaptability. Designed to work seamlessly with the Rotago F power harrow, the F-Drill CB F allows for customizable working widths and the ability to sow different crops at varying depths in a single pass, maximizing efficiency and yield potential.

With easy depth and pressure adjustments—whether manually or via ISOBUS—the F-Drill CB F ensures perfect seeding conditions every time. For added stability during transport, a supporting wheel is available, making it a practical choice for navigating Ireland's roads.

Advanced Grassland Machinery

This year, Kverneland is also showcasing a suite of advanced grassland machinery aimed at boosting productivity and efficiency in forage production. The Kverneland 85156 C tedder, debuting at the Ploughing Championships, offers a working width of 15.6 meters, significantly enhancing productivity and operator comfort. Its 14 small-diameter rotors ensure excellent crop turning in various conditions, while the TerraFlow ground-following system allows each rotor to flex and adapt independently, guaranteeing precise work across the entire width.

Kverneland will showcase its flagship butterfly mower, the 53100MT, a masterpiece of mowing technology. With a working width of up to 10.2 meters and the QuattroLink 'race car' suspension, this mower delivers unmatched ground tracking and cutting performance, ensuring exceptional forage quality and efficiency.

In addition to these, Kverneland's FastBale will be on display — the world's only non-stop round baler that eliminates the need to stop and start between bales. The FastBale's unique pre-chamber system ensures consistent bale density and high-quality forage, making it a must-have for any farmer looking to streamline hay and silage operations. This machine is sure to draw a crowd as always.

Precision CropCare Solutions

For those looking for advanced CropCare solutions, iXtrack T4 Trailed Sprayer and the Exacta TL Geospread disc spreader will be on show. The iXtrack T4 offers precision spraying with advanced boom control and ISOBUS compatibility, ensuring efficient chemical use and sustainable practices. The Exacta TL Geospread, featuring Geospread technology, provides accurate section control and variable rate application, maximizing fertilizer efficiency and crop yields.

Versatile McConnel Machinery and Siloking Feeders

As the official distributor for McConnel and Siloking in Ireland, Kverneland will present a range of these machines at the Ploughing Championships. McConnel machinery, including the 5455, 6572T, and 7775T models, along with Siloking feeders, including both twin and single tub models. Designed for precision feeding, these feeders offer efficiency and flexibility in managing livestock nutrition.

The Future Of Farming

By integrating innovative technology with tried-and-true methods, Kverneland continues to play a key role in advancing Irish agriculture.

"Whether you're looking to upgrade your tillage, grassland, or feeding equipment, be sure to call into our stand at the Ploughing. Our team will be there to offer advice and demonstrations, showing you firsthand how Kverneland's machinery can bring real benefits to your operations," says Conor Vaughan of Kverneland Group Ireland. "We're excited to meet everyone and discuss how we can help drive your farm's success in the coming years."

Don't miss the chance to experience the future of farming with Kverneland Group Ireland at the Ploughing Championships 2024. **Block 3 Row 17 Stand 355**

Kverneland is a brand of Kverneland Group

Kverneland Group is a leading international company developing, producing and distributing agricultural implements, electronic solutions and digital services. Productivity, efficiency, and sustainability are three important principles in today's agriculture, driving us every day to continuously develop our Agricultural Implement Technology. Kverneland Group offers an innovative range of soil and seeding equipment, forage and bale equipment, spreading, spraying, electronic solutions and digital farm services for agricultural tractors and implements.
